

KERALA STATE RUTRONIX

About Warehouse Management

Warehouse management share a major role in Logistic and supply chain management. Warehouse management includes monitoring stock storage, picking, and packing activities in a warehouse. The management process starts right from receiving the inventory from the suppliers, allocating storage space for all products, to moving them inside the warehouse.

The ultimate goal of warehouse management is to minimize operating costs while maintaining the quality of products.

Inventory management is about forecasting needs, ordering, receiving, allocating, and transferring stocked goods. To be more specific, it manages the amounts, costs, weight, dimensions, and location of the stock. This is to ensure that business owners know exactly what and when to replenish products or buy more materials to manufacture products, to meet customer demands.

Warehouse management is one facet of supply chain management. It affects retail order fulfillment, storage, inventory management, shipping, and distribution. Having an all-in-one solution lets you see what's happening across different functions of the warehouse in real-time such as inventory being received, orders being packed, shipments being labeled, and any other movement of goods.

PROGRAM STRUCTURE & COURSE DETAILS

COURSE
Name

Certified Course in
Warehouse & Inventory Management
(CCWIM)

ELIGIBILITY

SSLC

DURATION

3 Months +
1 Month Internship
