

KERALA STATE RUTRONIX

About Logistics

Logistics is the process of moving products and services in the supply chain. Logistics involves integration of information, customer service, transportation, inventory, warehousing, material handling and packaging. Logistics deals with the geographical positioning of raw materials, work in progress, finished goods and services where required in time at the possible lowest cost. Logistics can be understood as the tool for getting products and services where they are needed and when they are desired.

This course builds on the skills and knowledge in Logistics and Supply Chain Management. It offers the participants the opportunity to specialize in Fundamental Logistics, Export Documentation, Inventory and Warehousing Management, Transportation Management, Supply Chain Management, Demand Planning and Forecasting for professional recognition.

Job/ Carrier Opportunities

Workers in the logistics and supply chain management field make sure that goods and services get into the hands of consumers in time. All types of businesses, big and small, need logistics managers to help with inventory and accounts receivable. A small business may have one person in charge of these duties, while large corporations have entire logistics and supply chain departments.

- Direct the allocation of materials, supplies and finished products
- Develop business relationships with suppliers and customers
- Work to understand customers' needs and how to meet them
- Review the success of logistical functions and identify areas for improvement
- Propose improvements to management and customers
- Design strategies to minimize the cost or time required to move goods & rendering services
